October 2026

1. Executive Summary

Doge Pepe ($DOPE) is a community-driven meme cryptocurrency on the Ethereum blockchain. It was born from one of the internet's most expensive accidents: a coding experiment that accidentally consumed more than 400 million API tokens, generated a bill of approximately $1,900, and produced a unique low-poly hybrid character combining the Shiba Inu of Doge with the face of Pepe the Frog.

The slogan "Wrong API. Right Face." captures the essence of the project. $DOPE does not claim advanced utility, AI technology, or complex tokenomics beyond a simple, transparent ERC-20. It is pure meme culture — celebrating AI mishaps, internet humor, and the chaotic creativity that turns accidents into legends.

With a fixed total supply of 1 billion tokens, no mint function, and community-led growth, $DOPE aims to become a recognizable face in the meme coin space through virality, community engagement, and strategic exchange listings.

2. The Origin Story

Case File 01: One Wrong Endpoint

A creator was experimenting with 3D graphics. The goal was a small, harmless render — a Shiba Inu, maybe a frog. The script was pointed at the wrong API endpoint and left running unattended. By the time it was stopped, it had consumed over 400 million API tokens and produced a bill of roughly $1,900.

The output was unexpected: a low-poly Shiba Inu wearing the sleepy eyes and flat mouth of Pepe the Frog. The creator shared the result on Reddit under the title "I accidentally made a $1,900 meme." In the comments, the community gave the character a nickname: dope.

That single face became the foundation of $DOPE. The 400 million tokens and the $1,900 figure refer exclusively to the original API bill. They are not related to the token's supply or price.

3. Vision & Purpose

Vision: To turn the most expensive accidental meme into a lasting cultural icon within crypto.

Purpose: Build a fun, transparent, and community-owned meme coin that celebrates internet absurdity while providing a simple, high-liquidity trading experience on Ethereum.

$DOPE is not an AI project. It is a meme that happened to be born from an AI coding accident. The character is the product.

4. Tokenomics

Parameter	Details
Token Name	Doge Pepe
Ticker	$DOPE
Blockchain	Ethereum (ERC-20)
Contract Address	0x73dF7018Cbcb919CCdE48c3f12F4326688aC4446
Total Supply	1,000,000,000 (1 Billion)
Circulating Supply	1,000,000,000
Decimals	18
Mint Function	None
Buy / Sell Tax	0%
Ownership	Renounced / Community-driven

All tokens are in circulation. There is no team allocation, no vesting schedule, and no ability to mint additional tokens. Liquidity is provided through decentralized exchanges (primarily Uniswap V3).

5. Technology & Security

$DOPE is a standard ERC-20 token deployed on Ethereum. The contract source code is verified on Etherscan. It uses the OpenZeppelin-based implementation with no custom privileges, no proxy, and no honeypot functions.

Security notes commonly reported by automated scanners (GoPlus, Quick Intel, etc.) show no critical issues. Users should always verify the contract address before interacting.

6. Roadmap

Phase 1 — Launch (Completed)

- Token deployment on Ethereum
- Uniswap V3 liquidity pool creation
- Official website and social channels
- Community formation

Phase 2 — Growth

- Major centralized exchange listings (including Gate.io application)
- CoinMarketCap & CoinGecko listings
- Expanded community contests and meme campaigns
- Influencer and KOL collaborations

Phase 3 — Expansion

- Multi-chain presence (where community demand exists)
- Merchandise and physical goods featuring the $1,900 face
- Strategic partnerships within the meme ecosystem
- Long-term community treasury initiatives

7. Community

$DOPE is driven entirely by its community. The character was nicknamed by Reddit commenters, and the project continues in that same spirit of collective ownership.
